PROFESSIONAL SUMMARY

Economic analyst with 1.5 years of experience in data analysis, forecasting, and macroeconomic research. Proficient in Python, R, SQL, and Tableau for building predictive models, dashboards, and regulatory reports. Skilled in time series analysis and econometric modeling, with a focus on turning data into actionable insights for stakeholders. Holds an M.Sc. in Economics, specializing in quantitative modeling, econometrics, and business analytics.

EDUCATION

Indian Institute of Technology (IIT), Delhi

Master of Science in Economics

CGPA: 8.01 | Aug 2021 – May 2023

Key Coursework: Applied Econometrics, Time Series Forecasting, Probability and Statistics.

University of Delhi, P.G.D.A.V College

Bachelor of Arts (Hons.) in Economics

CGPA: 7.99 | July 2018 – May 2021

Key Coursework: Probability, Statistics, Microeconomics, and Macroeconomics

PROFESSIONAL EXPERIENCE

EXL Services, Gurugram

Nov 2023 – Present

Senior Business Analyst (Actuarial)

- Completed end-to-end actuarial valuation for **25+ Defined Benefit (DB) pension plans**, each covering **500-1,000 participants**, using **ProVal** and **Excel** for liability modeling and assumption testing.
- Delivered **30+ customized benefit statements and valuation reports** aligned with **PPA and ASC 715 regulations**, tailored to client specifications and audit requirements.
- Managed the **entire plan life cycle**, including **data cleansing, valuation modeling, reporting**, and support for **government filings**, ensuring full regulatory compliance and timely delivery.

Columbia University (Remote)

Research Assistant

Sep 2023 – Oct 2023

- Cleaned and structured U.S. SIPP panel data (20,000+ observations) to replicate findings from an academic paper, focusing on identifying promotion trends across firm sizes.

- Cleaned survey data and built a **ranking model using Pandas** to evaluate the performance of **1,000+ doctors** based on quantitative survey responses.
- Analyzed international trade data to identify the **top 10 MSME export markets** from a pool of **95+ countries**, supporting strategic recommendations.

PROJECTS

- Analyzed NSS Land & Livestock microdata in Stata by cleaning household-level data, examining key socio-economic variables, and applying the Palma ratio to measure land inequality across Indian states, finding notably high disparities in Punjab.
- Built a log–log regression model to estimate price elasticity for a restaurant café and determined the revenue-maximizing price point by analyzing demand sensitivity.

TECHNICAL SKILLS

Languages & Tools: Python, R, SQL, Tableau, Excel, Stata, ProVal

Techniques: Linear Regression, Macroeconomic Analysis, Hypothesis Testing, Time Series Analysis, Econometric Modeling, Data Visualization, Predictive Modelling, Logistic regression, Decision trees, Pension Valuation.
